

Laboratory #1

Your chosen platform's database system

What to do:

1. Take a platform/application of your choice (e.g., Facebook, Instagram, Netflix, etc.).
If you consider that it is too big, focus on a specific service of the platform (Facebook's feed, Instagram comments, Netflix's recommender system, etc.)
2. Try to find **reliable** information on the internet about the database system which that platform implements (for the chosen service)
3. Write your report as (**choose only one**)
 - a. Description of the system that it is actually implemented
 - b. Description of the system that you would consider if you were asked to implement that service

What to deliver:

- A PDF document (~2 pages long)
- You can write it in English, Catalan, or Spanish
- Add any diagrams and/or handmade draws that you may need for the explanation

How:

- In pairs (Don't have yours yet? Write me, please!)
- Only one of you need to deliver the document
- Do not forget to include your names and NIUBs

Delivery before September 30th (17:00) at UB's CV
